Mansfield Center for the Performing Arts
Control System Upgrades
Mansfield, TX

PROJECT DESCRIPTION

The new Center for the Performing Arts in Mansfield is a multi-purpose venue that's able serve students, staff, as well as the community. This building includes an auditorium with flexible seating, an 80-foot stage, and a digital sound enhancement system. The center also features a conference center with a 500-seat capacity that can be split up into six smaller areas for meetings, and smaller get-togethers.

The Center hired CRUX to design a new A/V control system along with several other system upgrades. Additionally, CRUX assisted the Center with the RFP process and managing the system installation.
